AB The review gives data on the designing of **avian influenza vaccines** and the preparation of human safe **vaccine** strains from the highly virulent strains of these viruses. It considers activated and live **vaccines**, promising adjuvants for **vaccines**, as well as recombinant, virus-vector, and DNA **vaccines** and virus-like particles. The results of a number of clinical trials of **avian influenza vaccines** are examined. Analysis of the data published leads to the conclusion that cell culture-based whole-virion **vaccines** with adjuvants are promising in combating **avian influenza**. [References: 121]
